PROJECT WORK REPORT
On

“OOJ LAB REPORT”

Submitted by

Anish Maheshwari (1BM22CS041)

Under the Guidance of

SHEETAL MAAM
ASSISTANT PROFESSOR

in partial fulfillment for the award of the degree of
BACHELOR OF ENGINEERING
in
COMPUTER SCIENCE AND ENGINEERING

B.M.S. COLLEGE OF ENGINEERING
(Autonomous Institution under VTU)
BENGALURU-560019
Mar 2024

B. M. S. College of Engineering,

Bull Temple Road, Bangalore 560019
(Affiliated To Visvesvaraya Technological University, Belgaum)
Department of Computer Science and Engineering

CERTIFICATE

This is to certify that the project work entitled **“OOJ LAB REPORT”** carried out by **Anish Maheshwari (IBM22CS041)** who are bonafide students of **B. M. S. College of Engineering**. It is in partial fulfillment for the award of **Bachelor of Engineering in Computer Science and Engineering** of the Visveswaraiiah Technological University, Belgaum during the year 2024. The project report has been approved as it satisfies the academic requirements in respect of **DBMS LAB REPORT** work prescribed for the said degree.

DECLARATION

I, **Anish Maheshwari (1BM22CS041)** of 3rd Semester, B.E, Department of Computer Science and Engineering, BMS College of Engineering, Bangalore, hereby declare that, this PROJECT entitled "**OOJ LAB REPORT**" has been carried out by me under the guidance of Sheetal ma'am, **Assistant Professor**, Department of CSE, BMS College of Engineering, Bangalore during the academic semester Dec 2023 - Mar 2024.

We also declare that to the best of our knowledge and belief, the development reported here is not from part of any other report by any other students.

TABLE OF CONTENTS

Serial No.	TITLE	PAGE NO.
1	Week 1- Program 1: Develop a Java program that prints all real solutions to the quadratic equation $ax^2+bx+c=0$. Read in a, b, c and use the quadratic formula. If the discriminant b^2-4ac is negative, display a message stating that there are no real solutions.	6-8
2	Week 2- Program 2: Develop a Java program to create a class Student with members usn, name, an array credits and an array marks. Include methods to accept and display details and a method to calculate SGPA of a student.	9-11
3	Week 3- Program 3: Create a class Book which contains four members: name, author, price, num_pages. Include a constructor to set the values for the members. Include methods to set and get the details of the objects. Include a toString() method that could display the complete details of the book. Develop a Java program to create n book objects. Program 4: Develop a Java program to create an abstract class named Shape that contains two integers and an empty method named printArea(). Provide three classes named Rectangle, Triangle and Circle such that each one of the classes extends the class Shape. Each one of the classes contains only the method printArea() that prints the area of the given shape.	12-17
4	Week 4- Program 5: Develop a Java program to create a class Bank that maintains two kinds of account for its customers, one called savings account and the other current account. The savings account provides compound interest and withdrawal facilities but no cheque book facility. The current account provides cheque book facility but no interest. Current account holders should also maintain a minimum balance and if the balance falls below this level, a service charge is imposed. Create a class Account that stores customer name, account number and type of account. From this derive the classes Cur-acct and Sav-acct to make them more specific to their requirements. Include the necessary methods in order to achieve the following tasks: a) Accept deposit from customer and update the balance.	17-23

	b) Display the balance. c) Compute and deposit interest d) Permit withdrawal and update the balance Check for the minimum balance, impose penalty if necessary and update the balance.	
5	Week 5 – Program 6: Create a package CIE which has two classes- Student and Internals. The class Personal has members like usn, name, sem. The class internals has an array that stores the internal marks scored in five courses of the current semester of the student. Create another package SEE which has the class External which is a derived class of Student. This class has an array that stores the SEE marks scored in five courses of the current semester of the student. Import the two packages in a file that declares the final marks of n students in all five courses.	23-26
6	Week 6 – Program 7: Write a program that demonstrates handling of exceptions in inheritance tree. Create a base class called “Father” and derived class called “Son” which extends the base class. In Father class, implement a constructor which takes the age and throws the exception WrongAge() when the input age<0. In Son class, implement a constructor that takes both father and son’s age and throws an exception if son’s age is >=father’s age. Program 8: Write a program which creates two threads, one thread displaying “BMS College of Engineering” once every ten seconds and another displaying “CSE” once every two seconds.	26-31
7	Week 7 – Program 9: Write a program that creates a user interface to perform integer divisions. The user enters two numbers in the text fields, Num1 and Num2. The division of Num1 and Num2 is displayed in the Result field when the Divide button is clicked. If Num1 or Num2 were not an integer, the program would throw a NumberFormatException. If Num2 were Zero, the program would throw an Arithmetic Exception Display the exception in a message dialog box.	31-35

WEEK 1

Program 1: Develop a Java program that prints all real solutions to the quadratic equation $ax^2+bx+c=0$. Read in a, b, c and use the quadratic formula. If the discriminant b^2-4ac is negative, display a message stating that there are no real solutions.

CODE:

```
import java.util.*;
public class QuadEq
{
    public static void main(String args[])
    {
        float a, b, c, d=0.0f, r1=0.0f, r2=0.0f;
        System.out.println("Enter values of a, b, c: ");
        Scanner read= new Scanner(System.in);
        a=read.nextFloat();
        b=read.nextFloat();
        c=read.nextFloat();
        if(a==0||b==0||c==0)
        {
            System.out.println("Invalid Input");
        }
        else
        {
            d=b*b-4*a*c;
            if(d>0)
            {
                r1=(float)(-b+Math.sqrt(d))/(2*a);
                r2=(float)(-b-Math.sqrt(d))/(2*a);
                System.out.println("Roots are real and distinct\nR1= "+r1+"\tR2= "+r2);
            }
        }
    }
}
```

```
    }  
    else if(d<0)  
    {  
        System.out.println("Roots are imaginary");  
    }  
    else  
    {  
        r1=-b/(2*a);  
        r2=r1;  
        System.out.println("Roots are real and equal\nR1= "+r1+"\tR2= "+r2);  
    }  
}  
System.out.println("Name: Anish Maheshwari \nUSN: 1BM22CS041");  
}  
}
```

Program 4: Develop a Java program to create an abstract class named Shape that contains two integers and an empty method named printArea(). Provide three classes named Rectangle, Triangle and Circle such that each one of the classes extends the class Shape. Each one of the classes contains only the method printArea() that prints the area of the given shape.

CODE:

```
import java.util.*;
abstract class Shape
{
    int x,y;
    void printArea()
    {
    }
}
class Rectangle extends Shape
{
    Rectangle(int l,int b)
    {
        x=l;
        y=b;
    }
    void printArea()
    {
        System.out.println("Rectangle Area is" +(x*y));
    }
}
class Triangle extends Shape
{
    Triangle(int l,int h)
    {
        x=l;
        y=h;
    }
    void printArea()
    {
```

```

        System.out.println("Triangle Area is" +((x*y)/2.0));
    }
}
class Circle extends Shape
{
    Circle(int r)
    {
        x=r;
    }
    void printArea()
    {
        System.out.println("Circle Area is" +(3.14*x*x));
    }
}
class ShapeTest
{
    public static void main(String args[])
    {
        Scanner sc=new Scanner(System.in);
        System.out.println("Enter length and breadth);
        int a= sc.nextInt();
        int b= sc.nextInt();
        Shape ob=new Rectangle(a,b);
        ob.printArea();
        Shape ob1=new Triangle(a,b);
        ob1.printArea();
        System.out.println("Enter radius);
        int r=sc.nextInt();
        Shape ob2=new Circle(r);
        ob2.printArea();
        System.out.println("Name: Anish Maheshwari \nUSN: 1BM22CS041 ");
    }
}

WEEK 4

Program 5: Develop a Java program to create a class Bank that maintains two kinds of account for its customers, one called savings account and the other current account. The savings account provides compound interest and withdrawal facilities but no cheque book facility. The current account provides cheque book facility but no interest. Current account holders should also maintain a minimum balance and if the balance falls below this level, a service charge is imposed.

Create a class Account that stores customer name, account number and type of account. From this derive the classes Cur-acct and Sav-acct to make them more specific to their requirements. Include the necessary methods in order to achieve the following tasks:

- e) Accept deposit from customer and update the balance.
- f) Display the balance.
- g) Compute and deposit interest
- h) Permit withdrawal and update the balance

Check for the minimum balance, impose penalty if necessary and update the balance.

CODE:

```
import java.util.Scanner;

class Account {
    String customerName;
```

```

int accountNumber;
String accountType;
double balance;

Account(String name, int number, String type, double initialBalance) {
    customerName = name;
    accountNumber = number;
accountType = type;
    balance = initialBalance;
}

void deposit(double amount) {
    if (amount > 0) {
        balance += amount;
        System.out.println("Deposit of INR " + amount + " successful");
    } else {
        System.out.println("Invalid deposit amount. Please enter a positive value.");
    }
}

void displayBalance() {
    System.out.println("Account Number: " + accountNumber);
    System.out.println("Customer Name: " + customerName);
    System.out.println("Account Type: " + accountType);
    System.out.println("Balance: INR " + balance);
}

void withdraw(double amount) {
    if (balance >= amount) {
        balance -= amount;
        System.out.println("Withdrawal of INR " + amount + " successful");
    } else {
        System.out.println("Insufficient funds");
    }
}

void computeInterest() {
}

void checkMinimumBalance(double minBalance, double serviceCharge) {
}
}

```

```

class SavAcct extends Account {
    double interestRate = 0.05;

    SavAcct(String name, int number, String type, double initialBalance) {
        super(name, number, type, initialBalance);
    }

    void computeInterest() {
        double interest = balance * interestRate;
        balance += interest;
        System.out.println("Interest of INR " + interest + " added to the account");
    }
}

class CurAcct extends Account {
    double minBalance = 1000;
    double serviceCharge = 50;

    CurAcct(String name, int number, String type, double initialBalance) {
        super(name, number, type, initialBalance);
    }

    void checkMinimumBalance(double minBalance, double serviceCharge) {
        if (balance < minBalance) {
            System.out.println("Service charge of INR " + serviceCharge + " imposed");
            balance -= serviceCharge;
        }
    }
}

public class Bank {

WEEK 5

Program 6: Create a package CIE which has two classes- Student and Internals. The class Personal has members like usn, name, sem. The class internals has an array that stores the internal marks scored in five courses of the current semester of the student. Create another package SEE which has the class External which is a derived class of Student. This class has an array that stores the SEE marks scored in five courses of the current semester of the student. Import the two packages in a file that declares the final marks of n students in all five courses.

CODE:

```
package CIE;
import java.util.*;
public class Student{
    public String name;
    public String usn;
    public int sem;
    public void accept()
    {
        Scanner input=new Scanner(System.in);
        System.out.println("Enter name, usn and semester: ");
        name= input.nextLine();
        usn= input.nextLine();
        sem= input.nextInt();
    }
}

package CIE;
public class Internals
{
    public int int_marks[]=new int[5];
}

package SEE;
import CIE.Student;
public class External extends Student
{
    public int ext_marks[]=new int[5];
}

import java.util.*;
import CIE.*;
import SEE.*;
public class FinalMarks
{
    public static void main(String args[])
    {
        int final_marks[]=new int[5];
        Scanner sc=new Scanner(System.in);
        System.out.println("Enter no. of students: ");
        int n=sc.nextInt();
        CIE.Internals obj[]=new CIE.Internals[n];
        SEE.External obj1[]=new SEE.External[n];
        for(int i=0;i<n;i++)
        {
```

```

        obj[i]=new CIE.Internals();
        obj1[i]=new SEE.External();
        System.out.println("Enter details of student "+(i+1));
        obj1[i].accept();
        for(int j=0;j<5;j++)
        {
            System.out.println("Enter Internal & final marks ofsubject"+(j+1));
            obj[i].int_marks[j]=sc.nextInt();
            obj1[i].ext_marks[j]=sc.nextInt();
            final_marks[j]=obj[i].int_marks[j]+ obj1[i].ext_marks[j];
        }
        System.out.println("Final marks of "+obj1[i].name);
        for(int k=0;k<5;k++)
        {
            System.out.println("Course "+(k+1)+": "+final_marks[k]);
        }
    }
    System.out.println("Name:Anish Maheshwari\tUSN:1BM22CS041");
}
}

```

OUTPUT:

WEEK 6

Program 7: Write a program that demonstrates handling of exceptions in inheritance tree. Create a base class called “Father” and derived class called “Son” which extends the base class. In Father class, implement a constructor which takes the age and throws the exception WrongAge() when the input age<0. In Son class, implement a constructor that takes both father and son’s age and throws an exception if son’s age is >=father’s age.

CODE:

```
import java.util.*;
class WrongAge extends Exception
{
    String message;
    public WrongAge(String msg)
    {
        this.message=msg;
        System.out.println(msg);
    }
}
class Father
{
    int f_age;
    Father(int f_age) throws WrongAge
    {
        if(f_age<0)
        {
            throw new WrongAge("Age cant be less than 0");
        }
        this.f_age=f_age;
    }
}
class Son extends Father
{
    int s_age;
    Son(int f_age,int s_age) throws WrongAge
    {
        super(f_age);
        if(f_age<=s_age)
        {
            throw new WrongAge("Father can't be younger than son");
        }
        this.s_age=s_age;
    }
}
class AgeTest
{
    public static void main(String args[])
    {
        int f,s;
        Scanner input=new Scanner(System.in);
        System.out.println("Enter age of father and son\n");
```

```

        f=input.nextInt();
        s=input.nextInt();
        try{
            Father ob1=new Father(f);
            Son ob2=new Son(f,s);
        }
        catch(WrongAge e)
        {
            System.out.println("Caught");
        }
        System.out.println("Name: Anish Maheshwari \nUSN: 1BM22CS041");
    }
}

```

OUTPUT:

```

Program 8: Write a program which creates two threads, one thread displaying “BMS College of Engineering” once every ten seconds and another displaying “CSE” once every two seconds.

CODE:

```
class DisplayThread extends Thread {  
    private String message;  
    private int intervalMillis;  
    public DisplayThread(String message, int intervalMillis) {  
        this.message = message;  
        this.intervalMillis = intervalMillis;  
    }  
    public void run() {  
        while (true) {  
            try {  
                System.out.println(message);  
                Thread.sleep(intervalMillis);  
            } catch (InterruptedException e) {  
                e.printStackTrace();  
            }  
        }  
    }  
}
```

```
}
```

```
public class Demo {
```

```
    public static void main(String[] args) {
```

```
        DisplayThread thread1 = new DisplayThread("BMS College of Engineering", 10000); // 10  
seconds
```

```
        DisplayThread thread2 = new DisplayThread("CSE", 2000); // 2 seconds
```

```
        thread1.start();
```

```
        thread2.start();
```

```
        System.out.println("Name:Anish Maheshwari \n USN:1BM22CS041");
```

```
    }
```

```
}
```

WEEK 7

Program 9: Write a program that creates a user interface to perform integer divisions. The user enters two numbers in the text fields, Num1 and Num2. The division of Num1 and Num2 is displayed in the Result field when the Divide button is clicked. If Num1 or Num2 were not an integer, the program would throw a `NumberFormatException`. If Num2 were Zero, the program would throw an `ArithmeticException`. Display the exception in a message dialog box.

CODE:

```
import javax.swing.*;
import java.awt.*;
import java.awt.event.*;
class SwingDemo
{
```

```

SwingDemo()
{
    JFrame jfrm= new JFrame("Divider app");
    jfrm.setSize(265,150);
    jfrm.setLayout(new FlowLayout());
    jfrm.setDefaultCloseOperation(JFrame.EXIT_ON_CLOSE);
    JLabel jlab=new JLabel("Enter the divider and dividend: ");
    JTextField ajtf=new JTextField(8);
    JTextField bjtf=new JTextField(8);

    JButton button = new JButton("Calculate");

    JLabel err=new JLabel();
    JLabel alab=new JLabel();
    JLabel blab= new JLabel();
    JLabel anslab=new JLabel();

    //add in order
    jfrm.add(err);//to display error
    jfrm.add(jlab);
    jfrm.add(ajtf);
    jfrm.add(bjtf);
    jfrm.add(button);
    jfrm.add(alab);
    jfrm.add(blab);
    jfrm.add(anslab);

    ActionListener I =new ActionListener()
    {
        public void actionPerformed(ActionEvent evt)
        {
            System.out.println("Action event from a text field");
        }
    };
    ajtf.addActionListener(I);
    bjtf.addActionListener(I);

    button.addActionListener(new ActionListener()
    {
        public void actionPerformed(ActionEvent evt)

```

```

    {
        if (err.getText() != null)
            err.setText("");
        try
        {
            int a = Integer.parseInt(ajtf.getText());
            int b = Integer.parseInt(bjtf.getText());
            int ans = a/b;

            alab.setText("\nA = " + a);
            blab.setText("\nB = " + b);
            anslab.setText("\nAns = " + ans + "    Anish Maheshwari [1BM22CS041]");
        }
        catch (NumberFormatException e)
        {
            alab.setText("");
            blab.setText("");
            anslab.setText("Anish Maheshwari [1BM22CS041]");
            err.setText("Enter only Integers!");
        }
        catch (ArithmeticException e)
        {
            alab.setText("");
            blab.setText("");
            anslab.setText("Anish Maheshwari [1BM22CS041]");
            err.setText("B should be NON zero!");
        }
    }
});

//display frame
jfrm.setVisible(true);
}
